## Aug 0 8 2005 Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

- 1. (Original) A continuous-time active complex bandpass filter comprising:
- a filter having a transfer function generated using only a plurality of transconductors and capacitors.
- 2. (Withdrawn) The continuous-time active complex bandpass filter of claim 1 wherein the transfer function includes an all-pole system.
- 3. (Original) The continuous-time active complex bandpass filter of claim 1 wherein the transfer function includes a system containing transmission zeros.
- 4. (Original) The continuous-time active complex bandpass filter of claim 1 wherein said filter is fabricated in monolithic technology selected from the group consisting of silicon CMOS, BiCMOS and bipolar processes.
- 5. (Withdrawn) The continuous-time active complex bandpass filter of claim 2 wherein said filter is fabricated as an on-chip active device.
- 6. (Withdrawn) The continuous-time active complex bandpass filter of claim 2 and further including:
  - a first-Order lowpass filter section having:
  - I input and 90-degree phase shifted Q input;
  - I output and 90-degree phase shifted Q output;
  - a pair of input transconductors for setting up the filter section gain;
- a pair of  $1/g_m$  resistors connected to said input transconductors and a pair of capacitors each having a value of C, connected to said pair of resistors to form a filter

section pole at frequency g<sub>m</sub>/C; and

a pair of cross-coupled transconductors  $g_{mA}$  connected to said input transcondutor and said pair of resistors to shift the position of the said pole to a complex location at  $(g_m + jg_{mA})/C$ , or  $(g_m - jg_{mA})/C$ .

7. (Withdrawn) The continuous-time active complex bandpass filter of claim 6 and further including:

a second-Order biquad filter including a cascaded pair of said first-Order lowpass filter sections wherein said lowpass filter sections create a pair of complex conjugate poles at  $(g_m \pm jg_{mA})/C$ .

- 8. (Original) The continuous-time active complex bandpass filter of claim 3 wherein said filter is fabricated as an on-chip active device.
- 9. (Original) The continuous-time active complex bandpass filter of claim 3 and further including:

a first-Order lowpass filter section having:

I input and 90-degree phase shifted Q input;

I output and 90-degree phase shifted Q output;

a pair of input unity-gain buffers;

a pair of input capacitors having a value C<sub>1</sub> connected to said buffers;

a pair of 1/g<sub>m</sub> resistors connected to said input capacitors;

a pair of output capacitors having a value C connected to said pair of resistors to form a filter section pole at frequency  $g_m/(C + \dot{C}_1)$ ;

a first pair of cross-coupled transconductors  $g_{mA}$  connected to said output capacitors and said resistors to shift the position of the said pole to a complex location

at  $(g_m + jg_{mA})/(C + C_1)$ , or  $(g_m - jg_{mA})/(C + C_1)$ ; and

a second pair of cross-coupled transconductors  $g_{mB}$  connected to said input capacitors and said resistors to form an imaginary axis zero at  $jg_{mB}/C_1$ .

10. (Original) The continuous-time active complex bandpass filter of claim 9 and further including:

a second-Order biquad filter section including a cascaded pair of said first-Order lowpass filter sections wherein said lowpass filter sections create a pair of complex conjugate poles at  $(g_m \pm jg_{mA})/(C_1 + C)$ .

- 11. (Original) The continuous-time active complex bandpass filter of claim 10 having a lowpass prototype of an even-Order.
- 12. (Original) The continuous-time active complex bandpass filter of claim 11 and further including:

at least one second-order biquad filter section containing no zeros, a single, a double, or two different imaginary axis zeros.

- 13. (Original) The continuous-time active complex bandpass filter of claim 10 having a lowpass prototype of an odd-Order.
- 14. (Original) The continuous-time active complex bandpass filter of claim 13 and further including:

one first-order lowpass filter section containing no zeros, or a single imaginary axis zero; and

at least one second-order biquad filter section containing no zeros, a single, a double, or two different imaginary axis zeros.
